Sophos client authentication agent linux.

Product or ServiceStatusDescriptionCloud OptixPatchedUsers may have noticed a brief outage on Friday, December 10, 2021 around 12:30 PM UTC as updates were deployed. Troj/JavaDI-AANTroj/Java-AINTroj/BatDI-GRMal/JavaKC-BXMRig Miner (PUA)Troj/Bckdr-RYBTroj/PSDI-LRMal/ShellDI-ALinux/DDoS-DTLinux/DDoS-DLSLinux/Miner-ADLinux/Miner-ZSLinux/Miner-WULinux/Rootkit-M Customers can download the Standalone EAS Proxy Installer version 9.7.2 from the Sophos website.Sophos REDNot vulnerableRED does not use Log4j.Sophos Web ApplianceNot vulnerableSWA does not use Log4j.Sophos WirelessNot vulnerableSophos Wireless access points do not use Log4j.Sophos ZTNANot vulnerableSophos ZTNA does not use Log4j.SophosLabs IntelixNot vulnerableSophosLabs Intelix does not use Log4j. Please note that not all of these payloads are exclusive to Log4jShell and may be arriving via another vector. Malicious Payload Detections SophosLabs has published detections for the malicious payloads coming via Log4shell. Sophos performed host forensics and log analysis in the Cloud Optix environment and determined that the vulnerability was not successfully exploited prior to fixes being deployed.PureMessageNot vulnerablePMX does not use Log4j.ReflexionNot impactedReflexion does not run an exploitable configuration.SafeGuard Enterprise (SGN)Not vulnerableSGN does not use Log4j.SG UTM (all versions)Not vulnerableSG UTM does not use Log4j.SG UTM Manager (SUM) (all versions)Not vulnerableSUM does not use Log4j.Sophos AuthenticatorNot vulnerableSophos Authenticator does not use Log4j.Sophos CentralNot impactedSophos Central does not run an exploitable configuration.Sophos Endpoint protection (Windows/Mac/Linux)Not vulnerableSophos Endpoint protection (Intercept X Endpoint, Intercept X for Server) does not use Log4j.Sophos EmailPatchedSophos performed host forensics and log analysis in the Sophos Email environment and determined that the vulnerability was not successfully exploited prior to fixes being deployed.Sophos Email ApplianceNot vulnerableSEA does not use Log4j.Sophos Enterprise Console (SEC)Not vulnerableSEC does not use Log4j.Sophos Firewall (all versions)Not vulnerableSophos Firewall does not use Log4j.Sophos Firewall auxiliary clientsNot vulnerableNone of the Sophos Firewall auxiliary clients use Log4j.Sophos Connect Client Sophos SSL VPN client Sophos Transparent Authentication Suite (STAS) Sophos Authentication for Thin Client (SATC) (EOL) Client Authentication Agent (all versions)Sophos HomeNot vulnerableSophos Home does not use Log4j.Sophos MobileNot impactedSophos Mobile (in Central, SaaS, and on-premises) does not run an exploitable configuration.Sophos Mobile EAS ProxyImpactedThe Sophos Mobile Standalone EAS Proxy is affected. This vulnerability makes it possible for attackers to inject text into log messages or log message parameters into server logs that load code from a remote server; The targeted server will then execute that code via calls to the Java Naming and Directory Interface (JNDI). Sophos has seen efforts to exploit LDAP, DNS and RMI, using a URL tagged to those services redirected to an external server. There have been some widespread malicious attempts to exploit internet facing services using this vulnerability. The vulnerability affects a broad range of services and applications on servers, making it extremely dangerous. JNDI interfaces with a number of network services, including the Lightweight Directory Access Protocol (LDAP), Domain Name Service (DNS), Java's Remote Interface (RMI), and the Common Object Request Broker (CORBA). xSorry to interruptCSS Error Overview Sophos General Authentication Agent for Windows operating system, forcing the user to authenticate the account to access the network, giving the administrator control over the user's network system How to configure The administrator creates an account for the login user to authenticate the user Step 1: Download the General Authentication Client installation file To download the General Authentication Client, we have 2 ways to do it Download from the User Portal page: Users will access the user portal page with Select the download file suitable for the operating system of the computer Sophos supports operating systems: Windows, MacOS, Linux 32 & 64 The second way is to download the installation file from the Sophos XG website with Admin accountLog in to Sophos XG with Admin account Authentication -> Client DownloadsSelect the installation file that matches the operating system of the user's computer Step 2: Install the Authentication Client software on the user's computer Right-click on the downloaded file and select Run as administratorWhen there is a certificate installation request for the computer -> Select YesWhen the installation is complete, open he software by double clicking the shortcut on the desktop, or right-click the icon in the lower right corner of the screenSelect the profiles and click Connect Step 3: Login to authenticate Users will log in with the user account, then access the user's network will be controlled through Sophos XG Step 4: Go to Sophos XG to check in the Current Activities section \*\* If you have difficulty configuring Sophos products in VietNam, please contact us: EMAIL: info@thegioifirewall.com HOTLINE: 02862711677 Skip To Main Content A severe remote code vulnerability was revealed in Apache's Log4J, an open-source logging library commonly used by apps and services across the internet. Customers will need to download and install version 9.7.2, available from Monday December 13, 2021, on the same machine where it is currently running. The detection are predominantly for crypto miners, attack scripts and malicious java downloaders. What Sophos products are affected? Sophos is reviewing and patching all affected applications and services as part of its incident response process.
